Supplemental Table 4. Multivariate analysis of variables associated with LOS		
	Coefficient	**95% CI**	**p-value**
PAD	0.15	(0.03, 0.26)	0.0123
Asthma	0.35	(0.24, 0.47)	<0.0001
Stroke	0.38	(0.29, 0.47)	<0.0001
IVDU	0.63	(0.5, 0.75)	<0.0001
Gender (m)	-0.15	(-0.23, -0.06)	0.0007

Risk factors with p-value less than 0.2 were selected as the univariate predictors of LOS. Multivariable linear regression was performed for the respective p-values to determine how coexistence of PAD, asthma, stroke, IVDU, and gender affected LOS.

IVDU, intravenous drug use; PAD, peripheral arterial disease;
